AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listing of claims in the application.

Listing of Claims:

- 1-3. (Canceled)
- 4. *(Previously Presented)* The method of claim 30, wherein said extruder is a twin screw extruder.
- 5. (Currently Amended) The method of claim 30, wherein the temperature of the polymer mixture in the extrusion die is achieved by heating the extrusion die externally.
- 6. (Currently Amended) The method of claim 30, wherein the temperature of the mixture polymer in the extrusion die is achieved by the induction of heat from the interior of the extrusion die.
 - 7. (Canceled)
- 8. (Currently Amended) The method of claim 30, wherein the temperature (°C) of the polymer mixture in the extrusion die is not higher than 60% above the crosslinking temperature (°C) of the polymer.
- 9. (Currently Amended) The method of claim 30, wherein the temperature (°C) of the polymer mixture before entering the extrusion die is not higher than 30% above the crystallite melting point (°C) of the polymer.
- 10. *(Currently Amended)* The method of claim 30, wherein the crosslinking temperature (°C) of the polymer is approximately 30% above the crystallite melting point (°C) of the polymer.
 - 11. (Currently Amended) The method of claim 30, wherein the crystallite melting point

of the polymer is approximately 125-140° C.

- 12. *(Currently Amended)* The method of claim 30, wherein the crosslinking temperature of the polymer is approximately 165-185° C.
 - 13. (Canceled)
 - 14. (Canceled)
- 15. *(Previously Presented)* The method of claim 30, wherein the tube is maintained at a temperature above the crosslinking temperature after discharge from the extrusion die.
- 16. (*Previously Presented*) The method of claim 30, wherein the tube is cooled after crosslinking.
 - 17-29. (Canceled)
- 30. *(Currently Amended)* A method for extruding a peroxide crosslinked polymer tube, comprising:

supplying a mixture to an extruder, the mixture comprising: a peroxide crosslinkable polymer, a crosslinking agent, and a stabilizing agent, wherein the mixture peroxide crosslinkable polymer has a crystallite melting point and a crosslinking temperature;

heating the mixture in the extruder with an external heating unit to a temperature above the crystallite melting point of the polymer but below the crosslinking temperature of the polymer;

controlling the temperature of the mixture in the extruder with the external heating unit and an internal cooling unit;

continuously feeding the mixture from the extruder to an extrusion die, wherein a melting pressure before entry to the extrusion die is approximately 700-1500 bar; [[and]]

heating the mixture in the extrusion die above the crosslinking temperature of the

polymer to effect at least a partial crosslinking of the <u>mixture</u> polymer in the extrusion die, <u>wherein</u> the temperature (°C) of the mixture in the extrusion die is at least 15% above the crosslinking temperature (°C); and

discharging the mixture from the extrusion die, wherein the degree of crosslinking of the mixture on discharge from the extrusion die is above 60%.
